

CAA & Generative AI

Our Policy

CAA students may not use Chat GPT, Bard, Claude, or any other generative AI system for the completion of any CAA school work assignments.

Unreliable

As of now Generative AI is not a reliable source of information. It has proven on many accounts to confidently give false information and cite incorrect sources.

How it affects us

CAA believes in a Biblical world view. We need to remember that AI is manmade. Thus, it is morally shaped by the worldviews of the people who make it. Using AI will shape how you think and the way you are. (Just like anything else we use!)

Generative AI as a tool

Calculators can be very helpful, but should only be used once you know how to do those math skills yourself. You would not want a 1st grader using a calculator to add when they don't know how to think for themselves to do it. Similarly we do not want our students using Generative AI before they can do those skills well. This does not mean only one or two times. Repetition is the key to learning! Students should practice a skill over and over even after they feel they know it, so that down the road they still know how to do it well.

Will my student miss out?

No! We can say that confidently after hearing from many experts in the areas of education and AI. Some of which their daily job is creating and using AI. Your student will not be left behind educationally by not using Generative AI.

*This policy is subject to change in the future, but after much research we believe this is currently the best decision for our students and their education.
